These systems can reliably survive the operating temperatures and utilized fan air to cool the support flanges of the HPT vibration levels at the tip seal location for extended case, reducing the case and shroud diameters, and hence periods of time (over 50 hours). This problem may be blade tip clearance, during cruise conditions (see Figure overcome with improved high temperature sensing electronics that are currently being developed. 1). These systems have generally been confined to the HPT and LPT sections. Although some ACC design and production work has been implemented for the PASSIVE THERMAL 5 HPC section, to the authors knowledge, no engines Passive thermal systems rely on material properties and are flying using ACC in the compressor section. engine operating temperatures to...
