( Busby et al. 1994 ) Risk factors evaluated are population trends, reductions in available habitat ( dams, logging, mining ), hatchery swamping or replacement. ESU was identified but no listing. 9. ( National Research Council NRC 1995 ) Sources of risk are habitat loss, effects of introduced species, and overharvesting. Low population numbers puts populations at risk. Risk factors identified are random changes in demographics ( age structure, sex composition, vital statistics ) and environmental fluctuations, catastrophes ( natural disaster ), accumulation of deleterious genetic factors on reduction of low population size, loss of adaptive variation within the population, habitat fragmentation, supplementation ( by which is meant hatchery swamping, not support of natural populations by artificial means ). 10. ( Waples 1995 ) Risk factors explicitly defined were: 1 ) loss of evolutionary legacy: loss of genetic variability which represent the reservoir for future evolutionary potential, 2 ) loss of genetic building blocks to preserve representative collection of components for future evolution, and 3 ) loss of ecological diversity. This also cites the risk factors in earlier status reviews ( Waples et al. 1991b ). 11. ( Waknitz et al. 1995 ) Risk factors considered were dam and redd count-based abundance and trends in abundance. Habitat alterations were part of the preliminary considerations of risk. 12. ( Weitkamp et al. 1995 ) Factors considered...
